1. System Overview

- GINUM is a web-based and accounting system hosted online for company-level business operations.
- The system centralizes finance, accounting, customers, suppliers, inventory, sales, purchases, employees, reports and user access.
- The system is designed for authenticated company users who can access data linked to their company account.
- The application supports business monitoring, accounting control and management reporting from one integrated platform.

2. Login and User Access Features

- Secure login using registered email address and password.
- Company-based user session after successful authentication.
- Role-based access for company users.
- Logged-in company name and user identity are shown in the header area.
- Protected pages cannot be accessed without valid authentication.
- User access is linked to the selected company record, helping to separate company data.

3. Dashboard Features

- Main dashboard for quick company performance overview.
- Displays summary cards for total revenue, total expenses and net profit.
- Includes revenue and expense overview chart area.
- Includes monthly sales comparison chart area.
- Provides refresh option to reload latest data.
- Useful for management-level monitoring and quick decision support.
- Dashboard values may depend on the active date range or last 30 days filter.

4. Accounting and Finance Features

- Centralized chart of accounts management.
- Ability to create, view and manage accounts.
- Supports asset, liability, equity, income and expense account categories.
- Maintains current balances for financial reporting.
- Supports opening trial balance setup.
- Supports debit and credit accounting structure.
- Accounting data is used to prepare financial statements and management reports.

5. Chart of Accounts Features

- Account code management.
- Account name management.
- Account type classification.
- Current balance tracking.
- Supports common accounts such as Cash in Hand, Bank Account, Accounts Receivable and Accounts Payable.
- Supports inventory accounts such as Raw Material Inventory and Finished Goods Inventory.
- Supports fixed asset accounts such as Land, Factory Building, Machinery and Furniture and Equipment.
- Supports revenue, cost of goods sold, administrative expense, selling expense, salary expense, depreciation expense and interest expense accounts.

6. Financial Report Features

- Balance Sheet report.
- Income Statement report.
- Trial Balance report.
- Cash Flow report.
- General Ledger report.
- Report refresh option.
- Print option for financial statements.
- Reports help users review company performance, financial position and accounting accuracy.

7. Balance Sheet Features

- Displays total assets, total liabilities and total equity.
- Groups assets into current assets and non-current assets.
- Shows account-wise balances with account codes.
- Displays equation status to show whether the balance sheet is balanced.
- Supports printing the balance sheet for review or filing.
- Useful for understanding company financial position at a selected date.

8. Income Statement Features

- Shows revenue and expenses.
- Calculates business profit or loss.
- Can include sales revenue, cost of goods sold, administrative expenses and selling expenses.
- Can include salary, depreciation and interest expenses.
- Useful for reviewing company operational performance.

9. Trial Balance Features

- Displays debit and credit account balances.
- Helps verify whether total debits equal total credits.
- Useful after entering opening balances and business transactions.
- Helps identify account balance mismatches before preparing final reports.

10. General Ledger Features

- Shows account-wise transaction history.
- Displays debit and credit movements.
- Helps trace how each account balance was formed.
- Useful for audit review, error checking and explaining financial balances.

11. Supplier Management Features

- Supplier master data management.
- View all suppliers.
- Create new supplier records.
- Store supplier contact details.
- Link suppliers with purchase transactions.
- Supports supplier payment and aged payable workflows.

12. Purchase Management Features

- View all purchase orders.
- Create purchase orders.
- Record supplier purchases.
- Track purchase order details.
- Link purchased items with supplier records.
- Support credit purchases and cash or bank purchases.
- Purchase records can support inventory increase and accounts payable updates.

13. Aged Payables Features

- Track supplier outstanding balances.
- View payable amounts by supplier.
- Support supplier payment planning.
- Help identify overdue supplier payments.
- Useful for accounts payable control and cash flow planning.

14. Customer Management Features

- Customer master data management.
- View all customers.
- Create new customer records.
- Store customer contact information.
- Link customers with sales transactions.
- Supports receivable and aged receivable workflows.

15. Sales Management Features

- View all sales orders.
- Create new sales.
- Record cash sales.
- Record credit sales.
- Link sales with customer records.
- Link sales with inventory items.
- Sales records can support revenue recognition and accounts receivable updates.

16. Aged Receivables Features

- Track customer outstanding balances.
- View receivable amounts by customer.
- Help monitor credit customers.
- Support collection follow-up.
- Useful for accounts receivable control and working capital management.

17. Inventory Features

- Inventory item management.
- Raw material inventory tracking.
- Finished goods inventory tracking.
- Item cost and selling price management.
- Stock balance visibility.
- Opening stock and closing inventory balance support.
- Inventory values can be reflected in financial reports.

18. Manufacturing and Costing Support Features

- Raw material issue tracking.
- Work in progress or manufacturing cost tracking.
- Finished goods production tracking.
- Cost of goods sold tracking.
- Manufacturing-related accounting entries can affect inventory and expense accounts.
- Supports demonstration of production-based accounting flows.

19. Fixed Asset Features

- Fixed asset account support.
- Land, building, machinery, furniture and equipment account tracking.
- New asset purchase recording.
- Accumulated depreciation account support.
- Depreciation expense recording.
- Helps maintain asset value and depreciation impact in financial reports.

20. Depreciation Features

- Separate depreciation menu/module.
- Depreciation expense tracking.
- Accumulated depreciation tracking for fixed assets.
- Supports building depreciation, machinery depreciation and furniture depreciation.
- Depreciation values can be reflected in Balance Sheet and Income Statement reports.

21. Bank and Cash Features

- Cash in Hand account tracking.
- Bank Account tracking.
- Bank-based payment recording.
- Customer collection recording.
- Supplier payment recording.
- Loan repayment recording.
- Interest payment recording.
- Cash and bank balances can be shown in financial reports.

22. Loan and Interest Features

- Bank loan account tracking.
- Loan repayment transaction support.
- Interest expense recording.
- Loan balance shown under liabilities.
- Interest expense shown in income statement calculations.

23. HR and Employee Management Features

- Employee module access.
- View all employees.
- Add or manage employee records.
- Department management.
- Designation management.
- User-related employee setup support.

24. Department and Designation Features

- Department setup.
- New department creation.
- Designation setup.
- New designation creation.
- Supports company organizational structure.
- Helps connect employees with departments and job roles.

25. User Management Features

- User management menu.
- User account creation and control.
- Company role assignment.
- User access separation.
- Supports system administration and accountability.
- Role-based access helps users access only the modules and data relevant to their responsibility.

26. Project Management Features

- Project module available in the sidebar.
- View all projects.
- Create project records.
- Can be used to track company projects or internal business activities.
- Useful for organizing work beyond daily accounting and sales transactions.

27. Notification Features

- Notification icon available in the top navigation bar.
- Can support business alerts and system messages.
- Useful for pending actions, approvals, reminders or important updates.

28. Reporting and Management Visibility Features

- Central reports section.
- Financial statements available from one location.
- Business data converted into management information.
- Helps users review company performance.
- Helps identify accounting errors, stock issues and financial position.

29. Print and Documentation Features

- Print option available for Balance Sheet.
- Financial reports can be printed for review or filing.
- Supports document-based financial presentation.
- Useful for management meetings, audits and academic or client demonstrations.

30. Security and Control Features

- Authentication required before system access.
- User role shown after login.
- Company-specific access control.
- Protected API and frontend routes.
- Financial data linked to company ID.
- Role-based access control supports operational security and user accountability.

31. Key Business Benefits

- Centralized business data management.
- Easier financial reporting.
- Better visibility of assets, liabilities and equity.
- Improved supplier and customer tracking.
- Better sales and purchase record management.
- Inventory values connected with accounting reports.
- Reduced manual report preparation.
- Improved company-level decision making.
- Better user accountability through login and role control.
- Scalable structure for future expansion.

32. Summary

- GINUM provides a practical web-based platform for managing accounting, finance, customers, suppliers, inventory, sales, purchases, employees, departments, users and reports.
- The strongest current feature area is accounting and reporting, especially Balance Sheet, Income Statement, Trial Balance, Cash Flow and General Ledger.
- The system can be used to demonstrate how opening balances and business transactions affect financial statements.
